Solutions for COPD and Bronchiectasis Patients

Understanding the Impact

Bronchiectasis can frequently occur in parallel with more common forms of chronic lung disease including COPD and asthma.

According to a recent study, the majority of frequent COPD exacerbators (92.7%) have concomitant Bronchiectasis.1

“Although more research is required to narrow down the prevalence rate of bronchiectasis in the U.S., we do know that COPD patients are at an increased risk of developing bronchiectasis. Early detection of bronchiectasis can significantly improve patients’ quality of life. Properly managing this condition can help with the prevention of exacerbations, severe lung infections, and the worsening of bronchiectasis.”

— Dr. Byron Thomashow, COPD Foundation Chairman

How long will the oxygen last at this flowrate?

Praxair’s Grab ‘n Go® Digital portable medical oxygen system now features an easy-to-read “time remaining” display, with audible and visual alerts. These alerts are designed to activate if the cylinder pressure drops below 300 psig. With no need to estimate oxygen supply, transports can be more efficient with reduced human error.

No guesswork. No maintenance. Everything you need is built into the new Grab ‘n Go® Digital system and maintained by Praxair.

Sil.Flex™ TC Pad

Innovative pad stabilizes trach flange and absorbs pressure at stoma sites

Stoma sites may become sensitive or compromised due to constant pressure or movement of the tracheostomy tube and flange against tender tissue. The Sil.Flex™ TC Pad is designed to cushion the area between the flange and the stoma site, reducing movement and pressure at the site. The contoured surface of the Stoma Pad provides a stable, comfortable interface between the flange and the patient’s neck.

Early use of the use of the TC Pad may assist in reducing irritation and tissue breakdown at the stoma site as well stabilizing the tracheostomy tube. Use of the TC Pad may decrease the air leak around the stoma site during trach weaning or during speech therapy by improving the seal between pad and stoma site.

Email us at information@respiralogics.com to use Sil.Flex for your trach patients.
